

Documents Management App

Use Cases Document

Login

Use case 1:

Step1: Login to Admin

Details - Login to the admin user using username and password .The authentication is needed .The data will be stored as a JSON File in the server .After the successful validation Route to admin Dashboard.If authentication failed show "ERROR MESSAGE"

Admin Dashboard

Use case 1: Admin profile avatar should be displayed in the top with an option to logout from the screen and go back to the login screen.

Use case 1:

Step1: If User Selects the Training Documents Management Route to Training Documents Page

Use case 2:

Step1: If the user selects any tab other than "Training Documents" pops up the page with message "FUNCTIONALITY NOT IMPLEMENTED".

Training Document

Use case 1

Select "Company name" ,"version" ,"Training" and click the button "Upload" Route to "upload documents upload page".Even if nothing selected (leave everything as all) and clicked upload button user can change all the field in the document upload button

Expected output :

The page should be loaded with the values Admin selected before pressing the upload button.

Use case 2

If use clicks on the view action the corresponding pdf should display in a new browser window

Use case 3

If the user selects the edit option page should route to the “documents upload page” . the company name ,training ,version should be loaded by default and only required minimum field can be editable .also the file name should be exactly same as file selected for edit

Use case 4

If the user selects the delete option that particular entry should be removed both from the server and changes should be reflected back in the UI.

Use case 5

If user Select “Company name” ,”version” ,”Training” and click the button filter only entries matching to all these categories should be displayed

Example- 1 - if User Selects a company name , version attributes and leave training attribute as blank then output should be “ displaying all the training documents of that company with version matches with selected version.

Example 2- if user chooses to leave all the three attributes(company, version, training) as blank then should display all the documents present in the database

Use case 6

Back Router arrow should route back to the dashboard screen

Use case 7

If User selects company name all distinct values of the version and training should be available as a select option in the corresponding fields

Documents Upload page

Use case 1

Step 1

Admin has the provision to change all the fields including those already selected if routed via upload else(if routed via edit option)only minimum version can be selected. The Required Minimum version should be less than the version .

Step 2

If Admin presses upload button the details should save in server

Step 3 - On clicking Back Router Arrow the view should go back to the training documents page with updated content
